

SQL Practice Task – Subqueries (Part 1)

Topics Covered

- Scalar Subqueries
- Multi-row Subqueries
- Correlated Subqueries

Instructions

- Create the database and tables as instructed.
 - Insert your own sample data (minimum 10 records in each table unless specified).
 - Solve every question **using only Subqueries**.
 - **Do NOT use JOINS.**
 - Execute every query and verify the output.
-

Database Scenario

You are developing a database for a company called **TechNova Solutions**.

The company has two tables:

- Departments
- Employees

Employees belong to different departments, and the management wants various analytical reports using **Subqueries**.

Create the Tables

Create the following tables:

departments

Column	Data Type
id	INT
department_name	VARCHAR(50)
location	VARCHAR(50)

employees

Column	Data Type
id	INT

Column	Data Type
name	VARCHAR(50)
salary	DECIMAL(10,2)
department_id	INT

Use appropriate **PRIMARY KEY** and **FOREIGN KEY** constraints.

Insert:

- At least **4 Departments**
- At least **10 Employees**

Make sure:

- Multiple employees belong to the same department.
- Different departments have different average salaries.
- At least two departments are in the same city.

Section A – Scalar Subqueries

Use **only Scalar Subqueries**.

1.

Display employees earning more than the company average salary.

```

40 • select* from employees
41 where
42 salary > (select avg(salary) from employees);

```

The screenshot shows a database query interface. At the top, the SQL query is entered: `select* from employees where salary > (select avg(salary) from employees);`. Below the query editor, there is a toolbar with options like 'Result Grid', 'Filter Rows', 'Edit', and 'Export'. The 'Result Grid' is selected, and it displays a table with the following data:

	id	name	salary	department_id
▶	101	Dinesh	80000.00	1
	104	Anitha	75000.00	2
	105	Kalyan	85000.00	3
	108	Siddhu	81000.00	2
	109	Bob	90000.00	1
	110	Pavan	82000.00	3
*	NULL	NULL	NULL	NULL

2.

Display the employee(s) earning the highest salary.

```
44 • select * from employees
45 where
46 salary = (select max(salary) from employees);
```

Result Grid | Filter Rows: | Edit: | Export

	id	name	salary	department_id
▶	109	Bob	90000.00	1
*	NULL	NULL	NULL	NULL

3.

Display the employee(s) earning the lowest salary.

```
48 • select * from employees
49 where
50 salary = (select min(salary) from employees);
```

Result Grid | Filter Rows: | Edit: | Export

	id	name	salary	department_id
▶	106	Babu	35000.00	4
*	NULL	NULL	NULL	NULL

4.

Display employees earning more than the minimum salary.

```

52 • select * from employees
53 where
54 salary > (select min(salary) from employees);

```

Result Grid		Filter Rows:		Edit:			Exp
	id	name	salary	department_id			
▶	101	Dinesh	80000.00	1			
	102	Akhila	68000.00	2			
	103	Sushma	65000.00	1			
	104	Anitha	75000.00	2			
	105	Kalyan	85000.00	3			
	107	Vignesh	40000.00	4			
	108	Siddhu	81000.00	2			
	109	Bob	90000.00	1			
	110	Pavan	82000.00	3			
*	NULL	NULL	NULL	NULL			

5.

Display employees earning less than the highest salary.

```

56 • select * from employees
57 where
58 salary < (select max(salary) from employees);

```

Result Grid		Filter Rows:		Edit:			
	id	name	salary	department_id			
▶	101	Dinesh	80000.00	1			
	102	Akhila	68000.00	2			
	103	Sushma	65000.00	1			
	104	Anitha	75000.00	2			
	105	Kalyan	85000.00	3			
	106	Babu	35000.00	4			
	107	Vignesh	40000.00	4			
	108	Siddhu	81000.00	2			
	110	Pavan	82000.00	3			
*	NULL	NULL	NULL	NULL			

6.

Display employees earning exactly the average salary.

Observe the output.

```

60 • select * from employees
61 where
62 salary=(select avg(salary) from employees);

```

Result Grid

Filter Rows:

Edit:

	id	name	salary	department_id
*	NULL	NULL	NULL	NULL

7.

Display employees earning greater than the average salary but less than the highest salary.

```

64 • select * from employees
65 where
66 salary > (select avg(salary) from employees) and salary < (select max(salary) from employees);

```

Result Grid

*	NULL	NULL	NULL	NULL

14.

Display employees working in Engineering or Sales departments.

```
92 • select * from employees
93   where
94   department_id in (select id from departments
95   where
96   department_name='Engineering' or department_name='Sales');
```

Result Grid | Filter Rows: | Edit: | Export/Import:

	id	name	salary	department_id
▶	101	Dinesh	80000.00	1
	103	Sushma	65000.00	1
	109	Bob	90000.00	1
	102	Akhila	68000.00	2
	104	Anitha	75000.00	2
	108	Siddhu	81000.00	2
*	NULL	NULL	NULL	NULL

15.

Display employees belonging to departments whose ID is greater than 2.

```
98 • select * from employees
99   where
100   department_id in (select id from departments where id > 2);
101
```

Result Grid | Filter Rows: | Edit: | Export/Import:

	id	name	salary	department_id
▶	105	Kalyan	85000.00	3
	110	Pavan	82000.00	3
	106	Babu	35000.00	4
	107	Vignesh	40000.00	4
*	NULL	NULL	NULL	NULL

16.

Display employees belonging to departments located in Hyderabad or Chennai.

```
104 • select * from employees
105 where
106 department_id in (select id from departments
107 where location = 'Hyderabad' or location='Chennai');
```

Result Grid

	id	name	salary	department_id
▶	101	Dinesh	80000.00	1
	103	Sushma	65000.00	1

20.

Display employees belonging to all departments located in Hyderabad.

```

122 • select * from employees
123 where
124 department_id in (select id from departments where location = 'Hyderabad');

```

Result Grid Filter Rows: Edit: Export/Import: Wrap Cell Conte

	id	name	salary	department_id
▶	101	Dinesh	80000.00	1
	103	Sushma	65000.00	1
	109	Bob	90000.00	1
	105	Kalyan	85000.00	3
	110	Pavan	82000.00	3
*	NULL	NULL	NULL	NULL

Challenge Question

Try replacing **IN** with **=** in one of the above queries.

Observe the error and explain why it occurs.

```

select * from employees where department_id = (select id from departments where location = 'Hyderabad') LIMIT 0, 1000
0 19 17:49:35 Error Code: 1242. Subquery returns more than 1 row 0.000 sec

```

Section C – Correlated Subqueries

Use **only Correlated Subqueries**.

21.

Display employees earning more than the average salary of their own department.

```

126 • select * from employees e
127     where
128     salary > (select avg(salary) from employees
129     where department_id = e.department_id);

```
